If you or someone in your family has a pet allergy, take these tips from WebMD for easing your symptoms. People with pet allergies have over-sensitive immune systems. They can react to harmless proteins in the pet's urine, saliva or dander (dead skin cells). The symptoms that result are an allergic reaction. The substances that cause allergic reactions are allergens.

The proteins found in a pet's dander, skin flakes, saliva and urine can cause an allergic reaction or aggravate asthma symptoms in some people. Also, pet hair or fur can collect pollen, mold spores and other outdoor allergens. AAAAI experts explain it is a misconception that people are allergic to pet hair and it is false that a pet that sheds less will not cause a reaction. Overview. Pet allergy is an allergic reaction to proteins found in an animal's skin cells, saliva or urine. Signs of pet allergy include those.

ASCIA PCC Pet allergy KB. Allergies to pets, particularly to cats and dogs, are a common cause of allergic disease, including asthma and allergic.
